

LUMI GREY MICROPERFORATED is a grey PVC material with a grey rear side and micro-perforation on its surface. This cloth has been developed for front projection that requires high contrast and good chromatic performances, especially in Home Theatre applications. Moreover, the perforation on the top assures that sound can pass through it without losing its power. Diametre of the holes is 0.5 mm. On one square metre of Lumi Grey Micorperforated there are about 294.000 holes.
